

THE TAPE OF CHOICE FOR FOOD PROCESSORS

STA Acrylic Tape Excels in Cold Temperature Environments

As sealed cases are subjected to sub-zero environments such as freezers, food processing plants and outside shipping docks, STA's acrylic tapes continue to hold. In contrast, hot melt and natural rubber adhesives begin to glassify at 0°F putting the strength of their bond, and the contents, at risk.

When the temperature drops below freezing, you can rely on STA Proven Performance Acrylic tapes. We set the standard for carton sealing tape in cold environments.

With overall constructions from 1.7 to 3.1 mils, several stocked and custom sizes, STA has a product sure to fit your needs.

Contact us today to discuss your application requirements!
