

QUALITY MEANS CONSISTENCY

Look Closer At the Performance Of Your Packaging Tape

STA defines quality by manufacturing packaging tape with scientifically formulated adhesive, applied in a consistent, even thickness. Variations in adhesive coat weight compromises performance of the tape. Without consistency, you risk having a seal that you can't rely on.

Not sure how your current tape stacks up against STA's? We can help! Our technical experts will test your tape for the following:

- Film and adhesive thickness
- Cold temperature performance
- Fiber pull
- Adhesive (peel) and cohesive (shear) strength
- Roll length

We will provide you with a report which also includes overall observations of the color and clarity along with the results of the recommended STA products.

STA is the consistent choice in carton sealing tape. Contact us today to discuss your testing needs and make sure your tape matches it's specs!
